This sequence represents a primer for the H.pylori gly gene. The amplified sequence was used to compare homology of the coding sequences of the invention with other known proteins. The protein encoded by the DNA of the invention may be used in a vaccine to prevent or treat useful as potential H.pylori life cycle activators or inhibitors. The DNA and probes derived from it may be used for the identification of H.pylori in a sample and the diagnosis of H.pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and can be used to prevent the translation of H.pylori mRNA. Antibodies against the protein can be used in immunoassays to evaluate the abundance and distribution of H.pylori-specific antigens. The genomic sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            permeability. The method is useful for assaying permeability of a percutaneous drugs e.g. indomethacin. The skin permeability of a percutaneous drug can be assayed more efficiently. This sequence represents a mouse gene specific primer associated with skin permeability to a percutaneous drug. Note: This sequence is also available in electronic format directly from wipo at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                   Helicobacter pylori nucleic acid sequences and encoded polypeptide(s) useful in vaccines to treat or prevent H. pylori infection and for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                H.pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H.pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H.pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli
                                                                                                                           The invention comprises the amino acid and coding sequence of the human protein ALMS1 which is associated with Alstrom's syndrome. The DNA and protein sequences of the invention are useful in the diagnosis of Alstrom's syndrome. The present DNA sequence represents a PCR primer fo
                                                                                                                                                                                                                                                                                                           (HOFF )

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC protein activity of a cancer related transmembrane protein (CRTP) or gene (C); an antibody specific for a CRTP, or a T cell activated by a CRTP; and (CC) a carrier. The pharmaceutical composition may also comprise a (CRTP) by RNA interference or an antisense mechanism. The CRTPs of the CC RTP by RNA interference or an antisense mechanism. The CRTPs of the CC invention are selected from ABCC4, C20orf103, CACNAID, CDH6, CST, ENP3, CF L111856, GPR54, HAVCR1, SLCGA3, SLC30A4, TRG, and TRPM4. The CRTPs of the CC pharmaceutical composition is useful for treating cancer, e.g. colon cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney cancer, stomach cancer, and esophageal cancer. The present sequence is a CCRTP short interfering RNAs (siRNA) oligonucleotide. Note: The sequence cancer this patent did not form part of the printed specification, but the obtained in electronic format directly from WIPO at the probabilished_pct_sequences
                                                                                                                                                                                                                                                                                                                      밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             not form part of the printed specification, but was electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CRTP by RNA interference or an antisense mechanism. The CRTPs of the invention are selected from ABCC4, C20orf103, CACNA1D, CDH6, CST, ENPP3, FLJ11856, GPR54, HAVCR1, SLC6A3, SLC30A4, TRG, and TRPM4. The pharmaceutical composition is useful for treating cancer, e.g. colon cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney cancer, stomach cancer, and esophageal cancer. The present sequence is a target oligonucleotide from one such CRTP for which short interfering RNAs (siRNA) were produced. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a novel pharmaceutical composition CC comprising: (a) an agent capable of modulating an expression level or CC protein activity of a cancer-related transmembrane protein (CRTP) or gene CC; an antibody specific for a CRTP, or a T cell activated by a CRTP; and CC (b) a carrier. The pharmaceutical composition may also comprise a CC polynucleotide capable of inhibiting or decreasing the expression of the CC CRTP by RNA interference or an antisense mechanism. The CRTPs of the CC invention are selected from ABCC4, C20orf103, CACNAID, CDH6, CST, ENPP3, CC invention are selected from ABCC4, C20orf103, CACNAID, CDH6, CST, ENPP3, CC pharmaceutical composition is useful for treating cancer, the CC cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney CC cancer, stomach cancer, and esophageal cancer. The present sequence is a CC target oligonucleotide from one such CRTP for which short interfering CC RNAs (siRNA) were produced. Note: The sequence data for this patent did CC electronic format directly from WIPO at CC electronic format directly from WIPO at CC electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a novel pharmaceutical composition CC comprising: (a) an agent capable of modulating an expression level or CC protein activity of a cancer-related transmembrane protein (CRTP) or gene CC; an antibody specific for a CRTP, or a T cell activated by a CRTP; and CC polynucleotide capable of inhibiting or decreasing the expression of the CC polynucleotide capable of inhibiting or decreasing the expression of the CC polynucleotide capable of inhibiting or decreasing the expression of the CC polynucleotide capable of inhibiting or decreasing the expression of the CC polynucleotide. Interference or an antisense mechanism. The CRTPs of the CC pharmaceutical composition is useful for treating concer, CST, ENPP3, CC pharmaceutical composition is useful for treating cancer, e.g. colon CC cancer, stomach cancer, breast cancer, prostate cancer, liver cancer, kidney CC cancer, stomach cancer, and esophageal cancer. The present sequence is a CC CRTP short interfering RNAs (siRNA) oligonucleotide. Note: The sequence CC data for this patent did not form part of the printed specification, but the control of the printed specification of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                The present invention relates to a novel pharmaceutical composition comprising: (a) an agent capable of modulating an expression level or protein activity of a cancer-related transmembrane protein (CRTP) or general antibody specific for a CRTP, or a T cell activated by a CRTP; and (b) a carrier. The pharmaceutical composition may also comprise a polynucleotide capable of inhibiting or decreasing the expression of the CRTP by RNA interference or an antisense mechanism. The CRTPs of the
                                                                                                                                                                                                                                                                                                                                                                                                             Pharmaceutical composition comprising an agent capable of modulating an expression level or protein activity of a gene, e.g. ABCC4, or a T cell activated by the polypeptide or antibody, and a carrier, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FOLH1 siRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         24-MAR-2005

                    The present invention relates to a novel pharmaceutical composition comprising: (a) an agent capable of modulating an expression level or protein activity of a cancer-related transmembrane protein (CRTP) or gene; an antibody specific for a CRTP, or a T cell activated by a CRTP; and (b) a carrier. The pharmaceutical composition may also comprise a colonucleotide capable of inhibiting or decreasing the expression of the CRTP by RNA interference or an antisense mechanism. The CRTPs of the city that the capable of inhibiting or decreasing the expression of the CRTP by RNA interference or an antisense mechanism. The CRTPs of the city that the capable of inhibiting or decreasing the expression of the CRTPs of the CRTPs of the city that the capable of the city that the capable of the city that the cancer, e.g. colon colon colon cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney cancer, stomach cancer, breast cancer, prostate cancer. The present sequence is a CRTP short interfering RNAs (siRNA) oligonucleotide. Note: The sequence colon cata for this patent did not form part of the printed specification, but the other cancer in the electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pharmaceutical composition comprising an agent capable of modulating an expression level or protein activity of a gene, e.g. ABCC4, or a T cell activated by the polypeptide or antibody, and a carrier, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FLJ11856, GPR54, HAVCR1, SLC6A3, SLC3OA4, TRG, and TRPM4. The pharmaceutical composition is useful for treating cancer, e.g. colon cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney cancer, stomach cancer, and esophageal cancer. The present sequence is a CRTP short interfering RNAs (siRNA) oligonucleotide. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                      comprising: (a) an agent capable of modulating an expression level or protein activity of a cancer-related transmembrane protein (CRTP) or gene, an antibody specific for a CRTP, or a T cell activated by a CRTP; and (b) a carrier. The pharmaceutical composition may also comprise a polymucleotide capable of inhibiting or decreasing the expression of the CRTP by RNA interference or an antisense mechanism. The CRTPs of the invention are selected from ABCC4, C20orf103, CACNAID, CDH6, CST, ENPP3, FLJ11856, GPR54, HAVCR1, SLC6A3, SLC30A4, TRG, and TRPM4. The pharmaceutical composition is useful for treating cancer, e.g. colon cancer, lung cancer, breast cancer, prostate cancer, liver cancer, kidney cancer, stomach cancer, and esophageal cancer. The present sequence is a target oligonucleotide from one such CRTP for which short interfering RNAs (siRNA) were produced. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 21 BP; 8 A; 4 C; 4 G; 0 T; 5 U; 0 Other;

ID ADY338
AC ADY34
AC The invention relates to a method (M1) of diagnosing renal cell carcinon (RCC) or a predisposition for developing RCC in a subject. The method comprises determining in a biological sample derived from a subject, an expression level of an RCC-associated gene chosen from genes of RCCX 1-32, where an increase in the level as compared to a normal control level of the gene indicates that the subject suffers from or is at risk of developing RCC. Also described are (i) an RCC reference expression profile, comprising a pattern of gene expression of two or more genes carcinoma

                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                       The present invention describes a radiation hybrid map of the dog (Canine familiaris) genome comprising the genome location of a marker selected from AAA66139 to AAA66912. The radiation hybrid map is useful for identifying and localising dog genes, since it covers approximately 80 % of the dog genome and provides a dense map integrating different types (i.e. Type I and Type II) of markers. The map and the dog genome markers (or complementary sequences) are especially useful to identify genes responsible for phenotypic and behavioural traits in dogs, to identify morbid genes, to analyse diseases and identify implicated genes in such diseases and their alleles, and to study dog pedigrees. They may also be useful for isolating corresponding human gene sequences e.g. genes involved in genetic diseases
Dog genomic marker oligonucleotide sequence SEQ ID NO:393.
                                   09-OCT-2000 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New radiation hybrid map of the dog, Canine familiaris, for e.g. identifying genes implicated in phenotypic and or in genetic diseases and for studying dog pedigrees.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a radiation hybrid map of the dog (Canine familiaris) genome comprising the genome location of a marker selected from AnA66139 to AnA66942. The radiation hybrid map is useful for identifying and localising dog genes, since it covers approximately 80 % of the dog genome and provides a dense map integrating different types (i.e. Type I and Type II) of markers. The map and the dog genome markers (or complementary sequences) are especially useful to identify genes responsible for phenotypic and behavioural traits in dogs, to identify morbid genes, to analyse diseases and identify implicated genes in such diseases and their alleles, and to study dog pedigrees. They may also be
                                                                                                                                                                                                                                                                                       transplant rejection; immune system; rheumatoid arthritis; inflammatory bowel disease; multiple sclerosis; HIV; AIDS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Dog; genome; genomic marker; radiation hybrid map; identification; chromosome location; gene marker; polymorphic microsatellite marker; phenotype; behaviour; pedigree; ss.

The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a primer for a 50 mer oligonucleotide marker for diagnosis and monitoring of allograft rejection and other disorders.

Identifying a subject at risk of melanoma by detecting presence or absence of a polymorphic variation associated with melanoma, where the presence of polymorphic variations is indicative of the subject being at risk of melanoma.

Example 7; Page 119; 418pp; English.

The invention relates to a novel method for identifying a subject at risk of melanoma. The method comprises detecting the presence or absence of a coplymorphic variation associated with melanoma, where the presence of the cone or more polymorphic variations is indicative of the subject being at cidentifying a polymorphic variation associated with melanoma; an isolated concident polymorphic variation associated with melanoma; an isolated concletc acid which comprises a portion of or all of a nucleotide sequence comprising fully defined 68400-213300 base pairs sequences (SEQ ID NO. 3, 4, 5, 6, and/or 7) given in the specification, and comprises one or more comprising fully defined 68400-213300 base pairs sequence (SEQ ID NO. 3, 4, 5, 6, and/or 7) given in the specification, and comprises one or more comprising fully defined for in the specification, and comprises one or more comprision of the nucleotide sequence above, comprision and comprising a nucleotide comprision and comprision of the nucleotide sequence above, considered to a polymorphic consideration, and comprision to a polymorphic consideration, and comprision of the nucleotide sequence above, consideration, and comprision of the nucleotide sequence above, consideration, and comprision the isolated nucleic acid linked to a cold sequence; genotyping a nucleic encoded by the isolated nucleic consideration, and treating melanoma consideration and subject. The methods and sequences have cytostatic activity. The collymucleotides may be used in gene thorapy. The methods are useful for identifying a subject at risk of melanoma, treating melanoma in a collection of the collectide in the exemplification of the collectide in the exemplificati
